SUMMARY

Developer with ten years of professional experience building cloud-native applications, distributed systems, and e-commerce platforms; delivering high-scale services on AWS and GCP. Experienced leading cross-functional teams through architecture design, roadmap planning, and delivery. Specialized in Go, Node.js, and cloud infrastructure.

TECHNICAL SKILLS

Programming Languages: Go, TypeScript, JavaScript, Dart

Frameworks: Node.js, React, Vue, Flutter

Cloud & Infrastructure: AWS, GCP, Kubernetes, Docker

Databases: PostgreSQL, TimescaleDB, Clickhouse

SELECTED ACHIEVEMENTS

- Led integration that enabled Catena-X/Cofinity-X certification and marketplace listing.
- Delivered blockchain/mobile product showcased at NFT.NYC 2023.
- Designed and operated services handling 6M+ requests/day.
- Spearheaded microservice modernization initiative across a large healthcare organization.

EXPERIENCE

Backend Software Engineer

Glassdome, Inc.

Oct 2024 – Present

Seoul, KR

- Scrum master for a team of nine developers. Helped push development org to document technical and product decisions, improving communication and knowledge sharing across the org. Led or participated in technical design for every feature in my time there.
- Integrated with several vendors for sharing and receiving Product Carbon Footprints (PCFs), leading to the solution earning Catena-X certification and placement on their marketplace.
- Migrated timeseries database from Clickhouse to TimescaleDB, improving response time upwards of 80% and decreasing storage costs.
- Collaborated on rebuild of PCF product, designing systems from the ground-up for scalability and ease-of-use.
- Reduced manual workload for our consultants by implementing upload for calculation factor datasets, rather than a bespoke manual update whenever a new version was released.
- Designed and built Overall Equipment Effectiveness (OEE) module, a major request from customers for tracking performance in their factories.

Lead Software Engineer

MXN Technology

Sep 2021 – Oct 2024

Seoul, KR

- an international engineering team delivering a multi-country e-commerce platform built with Node.js, React, and Flutter, owning architecture, AWS infrastructure, stakeholder communication, and roadmap execution.
- Built two mobile apps with Flutter and their Node backends. One was presented at NFT.NYC in 2023.
- Designed and developed several Node servers and Quasar (Vue) frontends for order management and warehouse management systems.
- Managed company infrastructure in Google Cloud and AWS, migrating deployments from manual processes to automated ones, and set up infrastructure for other teams.
- Mentored and developed engineers into independent contributors, improving team delivery capacity and reducing onboarding burden.

Senior Member of Technical Staff*athenahealth*

Aug 2017 – Jul 2021

Watertown, MA, USA

- Served as scrum master for a team of developers based in the US and India.
- Led migration of a Perl monolith service to a Node.js microservice serving 1M+ requests/day and increasing success rate from 20% to 95%, while helping establish AWS best practices for the company at-large. Also designed and built a (different) RESTful Node.js micro-service from the ground up, serving over 6 million requests. Later trained both support staff and other developers on these services after becoming their sole maintainer.
- One of the tech leads on a major company initiative to rebuild our electronic prescription service, collaborating on its design, project planning, and development.

Associate Software Engineer*Thales Visionix*

July 2016 – Jul 2017

Billerica, MA, USA

- Built plugin for Unity 3D to retrieve data from company's motion trackers, and built demo application for showcasing this at trade shows.
- Took ownership of library/dll for motion trackers, performing bug fixes and updating to support newly-released device.

EDUCATION

University of St. Thomas*B.A., Computer and Information Sciences, 2016*

St. Paul, MN, USA
